

Product	Use	Application
Arboritec SATIN OIL	Re-oiling of parquet floors is every 5-7 years needed or for small area application after intensive stain treatment.	Using a cotton or microfiber cloth (long-pile), spread the oil evenly and polish it in. Avoid walking on the floor for the next 6-8 hours until the oil is completely absorbed.
Arboritec OIL REFRESHER	For cleaning of parquet floors, use once a month max. Removes dirt and stains. Thanks to oil content the floor is also nourished and cared for.	Dilute in water. Moisten the parquet floor with a cotton or microfiber cloth (long-pile).
Arboritec CLEANER Concentrate + Spray	For weekly cleaning of parquet floors or for PVC, LVT floors. Removes dirt and stains. If the Cleaner is used weekly, the Oil Refresher should be used every 5th time. The Cleaner Spray is ideal for treating stains.	Cleaner Concentrate dilute in water. Moisten the parquet floor with a cotton or microfiber cloth (long-pile). For Cleaner Spray: spray the affected area and allow it to work briefly, then wipe with a cloth.
Arboritec REFRESHER	Refresher is a modern care product for finished wood floors. Refresher can be used on laminate, vinyl, PVC or linoleum too. It dissolves with each new application and does not build layers. Refresher prevents and protect the floors from showing visible signs of aging and wear. Refresher is recommended after every 5th cleaning with Cleaner.	Floors previously treated with polish or wax must be thoroughly cleaned before using Refresher. Pour Arboritec Refresher directly from the can onto the floor. Don't dilute Refresher. Spread Refresher with a clean, damp mop or lint-free cloth. Allow to dry for approx. 1 hour. Afterward, the floor is ready for use. If streaks appear, the floor was likely treated with polish or wax. In this case, it must be thoroughly cleaned with suitable polish/wax remover.

Arboritec Spray mop kit is suitable for application of Oil Refresher and Cleaner.
